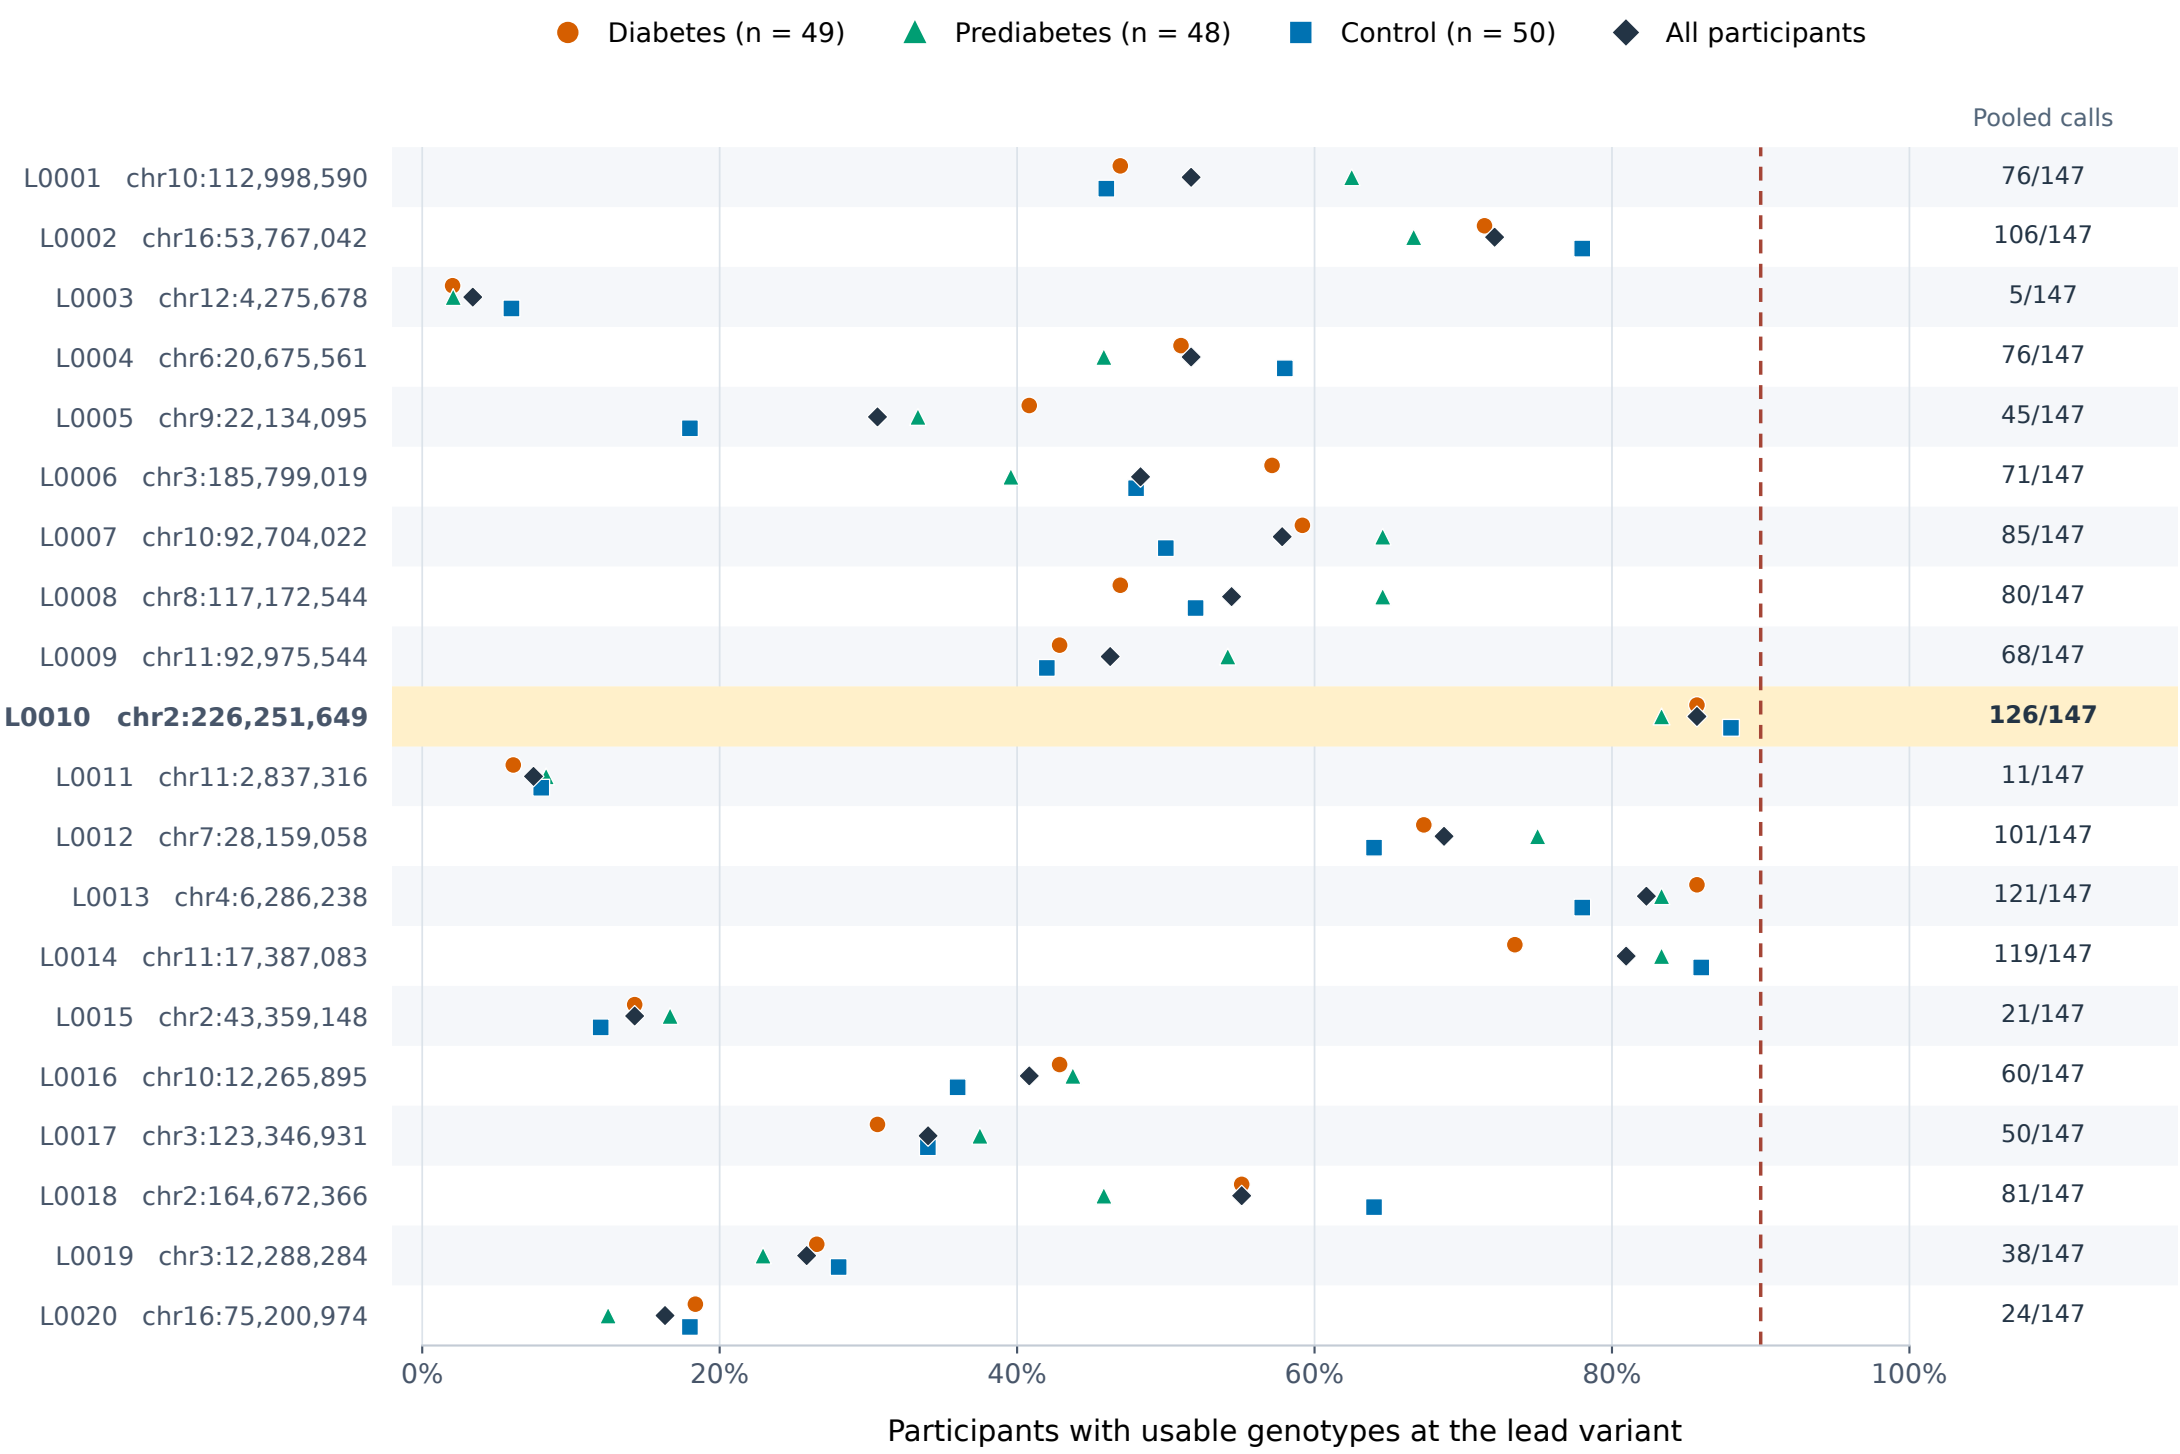
c Usable lead genotypes across selected regions

147 participants · 20 GWAS-selected regions · GRCh38

Usable genotype: DP ≥ 10 · GQ ≥ 20. Dashed line: 90% pooled completeness requirement.



Highlighted: L0010 has the highest pooled coverage, 126/147 (85.7%). 0/20 leads meet the pooled requirement.

Dots measure genotype availability. They do not show haplotype frequencies or a tested diabetes association.
